

Project Title: Creating an Inclusive and Engaging Camping Experience for Ontario Parks

Project Overview: Ontario Parks is seeking an innovative, end-to-end solution to enhance the camping experience for newcomers and non-traditional campers. The goal is to design a seamless digital and physical experience that simplifies planning, booking, and enjoying camping in Ontario Parks, fostering life-long appreciation for nature among visitors of all ages. They would like to improve on the current physical and digital systems they have in place already.

Project Objectives:

1. **Simplify Camping Preparation:** Provide clear, accessible recommendations for camping equipment suitable for various experience levels and budgets.
2. **Streamline Booking:** Modify their current system where necessary to create a user-friendly platform for finding and booking appropriate campsites in Ontario Parks.
3. **Enhance On-Site Experience:** Develop solutions for navigating parks, understanding available amenities, and engaging with nature.
4. **Offline Accessibility:** Incorporate offline functionality to address limited cellular connectivity and lack of Wi-Fi in most parks.
5. **Family and Child Engagement:** Create interactive, educational, and fun activities that engage children and inspire a love for the outdoors.

Target Audience:

- **Newcomers to Canada:** Individuals and families unfamiliar with Canadian camping culture.
- **Non-Traditional Campers:** Individuals with limited outdoor experience.
- **Families with Children:** Parents seeking safe, educational, and fun nature activities.

Key Considerations:

- **Accessibility:** Ensure the platform is inclusive and user-friendly for people of all abilities and backgrounds.

- **Offline Functionality:** Design critical features to work without internet access where possible, as well as design non-digital features.
- **User Engagement:** Incorporate gamification and interactive elements to keep users engaged, both digitally and physically
- **Sustainability:** Promote eco-friendly practices and respect for nature in both the digital product and physical assets

Success Metrics:

- Ease of use and accessibility of the platform.
- Positive feedback from target users during testing.
- Creative solutions for engaging children and families.
- Viable offline and non-digital functionality.

Inspiration and Research Resources:

- Existing Park reservation systems (e.g., Ontario Parks, Parks Canada, U.S. National Parks).
- Outdoor gear retailers for equipment recommendations.
- Educational apps and games for children.

Let's create a camping experience that invites everyone to discover and cherish Ontario's natural beauty!
